**Methods Committee Report**  
**Annual General Meeting, 2020**  
**Cassandra Walker, Methods Committee Chair**  
**Report date: 20 August 2020**

The methods committee is now focused on updating four important methods so that we can reflect the wheat industry needs. These methods include reviewing and test baking; the long-fermentation straight-dough, the rapid dough bake method, and evaluating the udon noodle and yellow alkaline noodle methods.

Once these methods are finalised and evaluated through interlaboratory testing, reviewed by the Methods Committee, the approved methods will be uploaded onto the AGSA the website.
